

**How to Re-Activate/Update CPanel License**

facebook.com/codingcyber | twitter.com/codingcyber

**Thank You for installing cPanel & WHM.**

In order to access the interface, you will need to make sure that the software license on this server is active.

Your license could not be activated because:

1. Read License File

1. First, go to <http://verify.cpanel.net/> and enter the public IP address of this server to make sure it is licensed.
2. If licensed, try running `/usr/local/cpanel/cpkeyutil` from the command line as root.
3. You'll also need to make sure that port **80** is open to contact our license server and that your server's hostname is correct.

If you don't currently have a license, you can obtain a trial license by registering at the [cPanel Store](#) and requesting a trial license. You can also [purchase](#) or [renew](#) a license directly from [cPanel](#) or from one of our [Partners](#).

If the license on this server is active, you will no longer see this message. If you have installed a license since h
